## HAVE AN ACE ♠ UP YOUR SLEEVE

G-CEM LinkAce is a dual-cure self-adhesive universal resin cement delivered in an automix syringe, designed for the adhesive luting of all-ceramic, zirconia, alumina, metal or composite indirect restorations. G-CEM LinkAce offers high polymerization in self-cure mode leading to perfect results, independently from the type of prosthetic material that is being cemented.

The phosphate monomers of G-CEM LinkAce guarantee an unsurpassed bonding durability. The high wear resistance gives peace of mind when luting CAD-CAM and metal-free restorations. Available in shades, AO3, A2, BO1, and Translucent. (2 x 2.7ml syringes)

## THE EASY RIDER

Easy Form Light Curing Gel from DETAX is a ready-for-use modelling resin, directly applied from the syringe. It's dimensionally stable and easily guided for modelling and has visual layer thickness control with slight translucency.

An MMA-free lightcuring gel, it has a very high fitting accuracy for multiple indications, particularly for casting. Easyform LC burns off without residue, even with a thicker layer, with no polymerisation delay, a high final hardness and stability, it can also be combined with conventional or light-curing wax. Easyform gives you direct gel application from the syringe, whilst being stable and easily guided for modelling. Colour: Red

## FIRST IMPRESSIONS LAST

The original zinc oxide and eugenol impression paste, designed for full impressions, that undergoes no dimensional change. With a controlled working time, the paste snap-sets for edentulous impression and denture plate adjustment. Includes a 150g and 60g tube.

## SAFETY FIRST

Breathing in waste particles is never good, so try these disposable respirators from Unisafe! Lightweight and comfortable, featuring twin elastic headbands, foam nose seal and an adjustable nose clip. Large easy-flow breathing valves to prevent heat and moisture build-up. Protection against mechanically and thermally generated particles. Three layered technology; soft inner ribbed mask, outer layer like prefilter and lightweight filter media to ensure minimal breathing resistance.

## TWIST & SHOUT... COME ON AND WORK IT ON OUT!

The twist concept has revolutionised the nature of polishing, and with these Eve Diapol Twists, you can make the most of this diamond impregnated 3-stage polishing system on your ceramic. Quickly make corrections without the need of additional glazing, as the final surface quality matches glazed surfaces. The innovative lamellar shape and the resulting adaptation to any surface structure simplifies polishing. Coarse (blue) for smoothing, Medium (pink) for pre-polishing and Fine (grey) for high-gloss polishing.

## LIGHT CURED PATTERN RESIN

DVA's Compo-Pattern composite resin is designed to serve as an alternative to fabricating a restorative pattern in wax. One of the benefits of using Compo-Pattern is absence of shrinkage, thus increasing accuracy of margins. Can be moulded or reformed and smoothed prior to curing. Curing takes only seconds to harden thus reducing production time. Burns clean due to the absence of ash residue. After curing, it can be ground upon and finished into any desired shape. Available in ivory or blue. Try it today.

## UNIVERSAL MIXING FOR ALL TYPES OF CERAMICS

HP's Cerafirm set is an extremely firm ceramic mix with the lowest possible shrinkage. For all HF and LF ceramics. Is Glycol free - no colour influence, and Time saving. Change the viscosity of the ceramic by mixing Fluid + Add. Create structures and texture even before baking. There are no limits, YOU decide what is possible! Refills of Fluid or Add also sold separately.

## THE ECO WARRIOR

The Renfert Basic ECO microblaster with up to two tanks offers high precision at a low price and in minimum space thanks to its compact dimensions. Synonymous with precision and advanced technology, Renfert's Basic Eco is the newest sandblaster in its catalogue. Their unique mixing chamber and specialised geometry of the IT nozzles provide decisive advantages such as; perfectly uniform abrasive flow, power and jet pattern, maximum field of vision and improved efficiency thereby reducing abrasive costs by 80 per cent. The Basic Eco is the perfect sandblaster for those seeking an economical and space saving unit. Includes 1 x 25-70 um tank and 1 x 70-250 um tank.

## UP, UP AND AWAY..

Have you tried Upcera Zirconia-blanks?!

These blocks have a high strength, excellent biocompatibility and exquisite aesthetics. The Upcera Zr-blank can be machined to dental restorations by different CNC or manual milling systems. Super translucent or Multi-layer in 95mm or 98mm diameters, with heights of 14mm or 18mm.

## crea.lign® CERAMIC COMPOSITE FOR NATURAL BEAUTY

crea.lign® veneering composite sets new standards for permanent veneering of metal, ceramic and polymer substructures.

This exceptional light-cured composite system of crea.lign®, makes it adapt elasticity and hardness to various substructure materials. crea.lign® contains only nano particles and no ground glass filler. It consists of 50% opalescent ceramic filler and a high-strength oligomer matrix. The omission of hard glass fillers results in optimised resistance to plaque and abrasion and prevents embrittlement of the material. Repair chips with the greatest of ease! Available in dentin, gum and stain shades.
