2017

YOU'LL BE TRENDY WITH RUBBER-TRENN

A latex-based separator, spacer and release agent for multiple dental applications. Creating a peelable film on acrylic and composite resin restorations. Paint a thin coat onto a preparation and let it dry for a few minutes. The coating allows resin to cure onto the surface, making the cured resin easier to remove. Acrylic resins tend to shrink when they cure and tighten onto the prep, making it difficult to remove, which can result in breakage of the stone model. A rubber separator makes removal easier and its use results in space between the prep and the inside of the provisional for cement space. Other uses also include; acting as separating agent between metal abutments and stone plaster, protecting tweezers from acid rust, and it makes other die spacers peelable. (Ref: 576171)

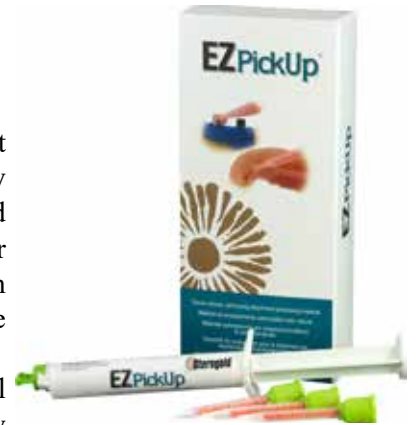

CrCo POLISHER

Edenta's Chromopol polishes are specifically designed abrasive polishes for Chrome Cobalt. They offer a long service life with maximum polishing capacity for optimally smoothing surfaces. The tip is to only apply light pressure when polishing. (Ref: 0202)

PICK ME UP BUTTERCUP, IT'S EZ!

A tissue-coloured, self-curing attachment processing material for any attachment, formerly known as ERA PickUp®, it's still the same trusted formula. It's odourless and tasteless, and has a lower curing temperature than traditional acrylics. With less than 1 percent shrinkage, it provides a more accurate and complete pickup of the attachment. It will not irritate freshly sutured tissue like methyl methacrylate will, and can be used to pick up any attachment. Try it today! (Ref: 220235)

BACTOL® ALCOHOL GEL provides antibacterial hand cleansing without the need for water. Specially formulated with a natural macadamia oil emollient to replace the skin's lipids which are removed by alcohol. This helps maintain skin integrity and prevents moisture loss leaving your hands hygienic, soft and replenished. Compliant with testing standards for alcohol based hand rubs, it keep your hands silky smooth and free from nasty germs and bacteria. Suitable for all areas of your office, laboratory, home or general areas. This antiseptic gel is a stand-out amongst others! Available in a 500ml pump pack for easy dispensing. (Ref: 02066)

3D LASER

Ideal for dental applications, this scanning spray provides a lot more uniform coverage using less spray material. Using less spray means this 3D scan spray is more cost effective! Its ability to apply even layers of spray with minimal thickness provides anti-glare, and is easily removable. One of the leading 3D sprays used in Europe! Formulated specifically for 3D scanning, it is free of acetone, talc & other dangerous chemicals.

V-WIPES - PILLARS OF CLEANLINESS

Clean and disinfect surfaces with hospital grade disinfectant wipes! No doubt you've heard of Viraclean, well then, get ready for Viraclean in disposable wipe form! V-Wipes unique pH neutral formula and its high quality apertured and absorbent fabric allows you to clean and disinfect any surface fast and effectively. Simply wipe the surface area and let it dry for at least 10 minutes. V-Wipes is non flammable and does not contain phenolics or chlorine. Leaves surfaces streak free and can even be used on metals because of the non-corrosive formula. (Ref: 210561)

HATH YOU TRIED THIS POLISHING DISC?

Did you know? Hatho is the only manufacturer who produces Buffs with removable rings! Using the authentic 3M Scotch Brite material for these buffs ensures you are receiving the quality the world has come to expect from Hatho. This polishing disc is one of our best sellers. With two layers, a coarse structure and a diameter of 110 mm, 6 mm bore, 90 mm core, they possess removable rings, so as the disc reduces, remove the outer rings as you go. (Ref: HA250110VL/2)

LOOKING FOR A GOOD SPRUE?

Part of the successful Pala range of accessories from Kulzer, their sprue wax comes in a packet of two thicknesses (as shown on the packaging) so you can tailor your jobs as you see fit! (Ref: K64710520)

NEW SIZE

Now in a 12.5 kg container, Renfert's aluminum oxide is an abrasive sand blasting material used for the removal

of oxide from precious metals. It prepares frameworks for precious metals, conditions the surface for porcelain and acrylic, and also removes cement from precious and non-precious metals, porcelain, zirconium oxide, and acrylic. Available in various abrasive levels from 50 µm, 110 µm, 125 µm to 250 µm. Also available in 5kg containers.

G'DAY MAIST!

High-performance Maist teeth are made of 5 layered, double cross-lined synthetic polymer, this gives Maist the most outstanding properties, such as; improved wear behaviour of implant dentures, and lifelike layering in anterior with internal mamelons and harmonized layering in posteriors. Available in a vast selection of moulds and in a well known shade classification. At only \$16.00 per set, how can you not love them!
